Construction of watermain replacements in the Village of Cerro Gordo were financed by the Drinking Water State Revolving Fund (SRF). The SRF program is administered by the Illinois Environmental Protection Agency and receives a portion of its money to fund these types of projects from the U.S. Environmental Protection Agency. This project includes replacement of 6,000 linear feet of watermain having various sizes. The upgrades will include fire hydrants and valves. Once complete, it will improve water quality for area residents and businesses in the Village of Cerro Gordo by improving the reducing the number of watermain breaks and subsequent boil orders. SRF programs operate in each state to provide communities the resources necessary to build, maintain, and improve the infrastructure that protects one of our most valuable resources: water.
